Question		5	4	3	2	1
I was treated with respect in this course.	n	19	5	1	0	0
	%	76.00%	20.00%	4.00%	0.00%	0.00%
In this course, I was encouraged to participate through class activities, projects, and/or assignments.	n	13	7	2	2	1
	%	52.00%	28.00%	8.00%	8.00%	4.00%
This course expanded my knowledge and skills in this subject matter.	n	12	7	4	2	0
	%	48.00%	28.00%	16.00%	8.00%	0.00%
I was encouraged to analyze and/or apply the concepts and skills taught in this course.	n	11	9	2	3	0
	%	44.00%	36.00%	8.00%	12.00%	0.00%
The learning goals for this course were clear to me.	n	13	5	3	3	1
	%	52.00%	20.00%	12.00%	12.00%	4.00%
This course helped me to connect the concepts and skills we learned to the world around me.	n	11	6	4	2	1
	%	45.83%	25.00%	16.67%	8.33%	4.17%
The course materials (Brightspace site, assigned readings, presentations, activities, etc.) helped me learn in this course.	n	12	8	1	4	0
	%	48.00%	32.00%	4.00%	16.00%	0.00%
The course presentations, materials, procedures, and deadlines were clearly organized.	n	15	7	2	1	0
	%	60.00%	28.00%	8.00%	4.00%	0.00%
I regularly/frequently had the opportunity to ask questions about concepts and skills in this course.	n	15	7	2	1	0
	%	60.00%	28.00%	8.00%	4.00%	0.00%
I feel I learned the subject matter well enough to help another student in this course.	n	11	5	4	4	1
	%	44.00%	20.00%	16.00%	16.00%	4.00%
I received feedback on my course work/assignments throughout the semester.	n	12	7	2	2	2
	%	48.00%	28.00%	8.00%	8.00%	8.00%
I received feedback on my course work/assignments that helped me learn.	n	12	5	5	1	2
	%	48.00%	20.00%	20.00%	4.00%	8.00%

Scale: 5 = Strongly Agree, 4 = Agree, 3 = Uncertain, 2 = Disagree, 1 = Strongly Disagree

What did you especially like about this course?: TU LI

- N/A
- I really liked the style of teaching and the way things were explained during lecture. Professor Li taught as if we had no prior knowledge to concepts in this course and explained everything in an easy to articulate way. There were very difficult concepts but he made them seem easy. The D2L page was also organized well which I appreciated. He is a really good professor.
- I thought that Li did a great job teaching this course. He was very respectful towards students and always made sure to check if we had any questions. His slides were very organized and easy to understand and his presentations in class were great.
- N/A
- Had a good understanding of what would be on tests and felt confident taking them.
- I liked the slideshows as they were very helpful.
- The amount of assignments made it significantly easier to manage the course
- nice professor
- Kept class interesting
- Interesting material and I liked the instructor
- Content is good, the instructor is good.
- I think the professor teaches this class in a very logical way, and I can follow the lesson step by step.
- Tu was very open and welcoming if we had questions. His office hours were consistent and did not change over the semester. He also stayed after class for students who had questions. He also worked around students schedules if they had to miss class.
- Very understanding
- A lot of the material learned used real-world examples and applications that helped me connect it to everyday life.
- I really enjoyed his course and he was really understanding for my schedule
- Mr. Li was a reasonable and very charismatic professor. His slides were well organized, and he always came to lectures prepared for each lesson.
- Organization
- In depth on the course material, good explaining
- The instructor was very lenient with grading and respected his students time
- I especially liked how Tu Li encourage participation and questions.
- n/a
- the professor was a nice guy

What suggestions would you make to improve this course?: TU LI

- N/A
- I have no suggestions.
- I would suggest focusing on r a bit more mostly due to how much of the overall grade the final project is worth and how it uses r.
- If possible please don't use too maybe theoretical knowledge too teach us, because it is really hard to understand with out any examples, even tho sometime do have, but there were still the same example in every concept, and still really hard to understand.
- Made it more complicated than it needed to be. Should make more clear and over problems that would be on the homework and test more in lectures.
- I would recommend feedback to students on homeworks, especially before tests so we know what we need to study more.
- the course is very equation heavy which is understandable, I just wish we actually learned the applications of the models and not just what they are.
- N/A
- Nothing
- No.
- I suggest that, when it comes to certain aspects of formulas, I've tried to provide examples similar to those found in homework assignments and substitute numbers into the formulas as much as possible, as this can help with understanding.
- none
- More use/teaching of R-code, or remove it completely.
- n/a
- I felt like the coding component of the class was not very relevant, and I didn't see the need for it, especially for this class in particular. Additionally, I think we should have been allowed to use calculators on the exams. At times during the class, it was difficult to keep up because I wasn't able to fully understand what was being said. It sometimes felt like the pace was too fast, which made it hard to follow your explanations of certain terms. Other than that, the class was good.
- Remove R platform
- n/a
- I think that the main confusions with the course is the heavy notation. The instructor uses different notation then most students are traditionally taught which makes simple problems confusing. This would not be too much of an issue if more numerical examples were used in lecture, however, most of the lectures rely completely on notation. This makes it very hard to understand the content.
- I would suggestion solving the example problems in class for better understanding.
- n/a
- make attendance optional, remove R coding, dont read off the slides, make the content more engaging/ interesting. If possible remove this course as a econ degree requirement.
